

# One Pager

- Smart or Sit aggregates start/sit recommendations from five of the top analysts. It will look up any player to see consensus opinion, projected points, and position rank.
- **The Problem:** Busy fantasy managers waste time jumping between podcasts and rankings. Conflicting information can create paralysis with no way to track the information accurately.
- **The Solution:** See all the analysts side-by-side with historical accuracy scores. Live game tracks prediction vs reality.
- My MVP will allow Fantasy managers to research players with information from 5 analysts. Toggle rankings and get live score updates to track predictions and reality.
- I'll do it using SQLite3, Python, DB Browser, React JS, and FastAPI.
